Brand New Book ***** Print on Demand *****.Excerpt from Practical Chemical Analysis of Blood: A Book Designed as a Brief Survey of This Subject, for Physicians and Laboratory Workers Accurate data on the chemical composition of the blood, especially of the nonprotein fraction, are of comparatively recent origin, and are primarily the result of American observations with American methods. We owe largely to Folin, Benedict, and Van Slyke the development of the methods which have made this work possible. The practical information which these methods have made available has been especially helpful, since they have given us very valuable data on just those conditions on which the older methods of blood examination, cytology, bacteriology, serology, gave little information - reference is made principally to such constitutional conditions as nephritis, diabetes, and gout. Although it is the primary object of this chapter to consider those observations which have served as a guide to the diagnosis and treatment of disease, it may be well at the outset to indicate the rather broad scope which chemical methods have recently taken in the study of the blood. They...
