Biomolecular computing is an interdisciplinary field that draws together molecular biology, DNA nanotechnology, chemistry, physics, computer science and mathematics. The annual international meeting on DNA-based computation has been an exciting forum where scientists of different backgrounds who share a common interest in biomolecular computing can meet and discuss their latest results. The central goal of this conference is to bring together experimentalists and theoreticians whose insights can calibrate each others approaches. The 9th Annual International Meeting on DNA Based Computers was held during June 14, 2003 in the University of Wisconsin, Madison, USA. The meeting had 106 registered participants from 12 countries around the world. On the first day of the meeting, we had three tutorials: the first was on self-assembly of DNA nano structures which focused on the basic techniques of using designed DNA nano molecules to be self-assembled onto larger structures for computational purposes. This tutorial was given by Hao Yan of Duke University. The second tutorial was given by Chengde Mao of Purdue University in which Dr. Mao presented basic DNA biochemistry that was designed for non experimentalists. The third tutorial was given by Max Garzon of the University of Memphis. Dr. Garzon gave a lecture on computational complexity which was tailored for non-computer scientists. The next three days were for invited plenary lectures, and regular oral and poster presentations. Invited plenary lectures were given by Helen Berman of Rutgers University (USA), Giancarlo Mauri of the University of Milan (Italy), Guenter von Kiedrowski of Ruhr University (Germany), and Sorin Istrail of Celera Applied Biosystems. The organizers sought to attract the most significant recent research with the highest impact on the development of the discipline. This item ships from multiple locations. Your book may arrive from Roseburg, OR, La Vergne, TN. Paperback.
